

# THE BOX SLIDER

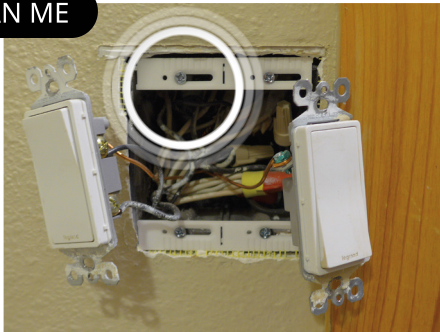

by INNOVATION SPECIFIC

## The electrician's best friend!

- ▶ Corrects an age-old problem
- ▶ Saves time, money, and installs in minutes
- ▶ No need to cut a switch plate cover or move an electrical box and replace drywall

SCAN ME

## PROBLEM | BEFORE

The light switch box was installed too close to the new door frame, requiring the cover to be cut to fit.

Not only is the plastic switch cover difficult to trim, but it also looks unprofessional and sloppy.

Moving the electrical box is time-consuming, expensive, and unnecessary.

## REPAIR | INSTALLATION

Remove light switch cover and light switches. Position the Box Sliders onto top and bottom mounts and loosely screw them in. Slide over into the desired position and tighten.

Reinstall switches into the Box Sliders mounts and replace light switch cover. **It's that easy.**

## SOLUTION | AFTER

The light switch cover now looks as though it was originally installed in the correct position.

This easy fix allows the switches to move away from the frame and the cover to be correctly positioned.
